PERSONAL LEARNING AND WORK LOG

Stage 1 | 15 XP | Submission deadline: 24 October 2026, 23:59 Beijing Time

1. Personal Learning Log 墨仁 / 1820262039

Date: 21 October 2026

Activity and purpose:

I worked on making the Stage 1 Project Plan for our SLN team.

My contribution and outcome:

I organized the document, including the project goals, topics, schedule, and task list. The result was a complete project plan draft.

Learning and reflection:

At first, I found it hard to organize all the information. After reading the assignment instructions, I understood how to arrange the document better.

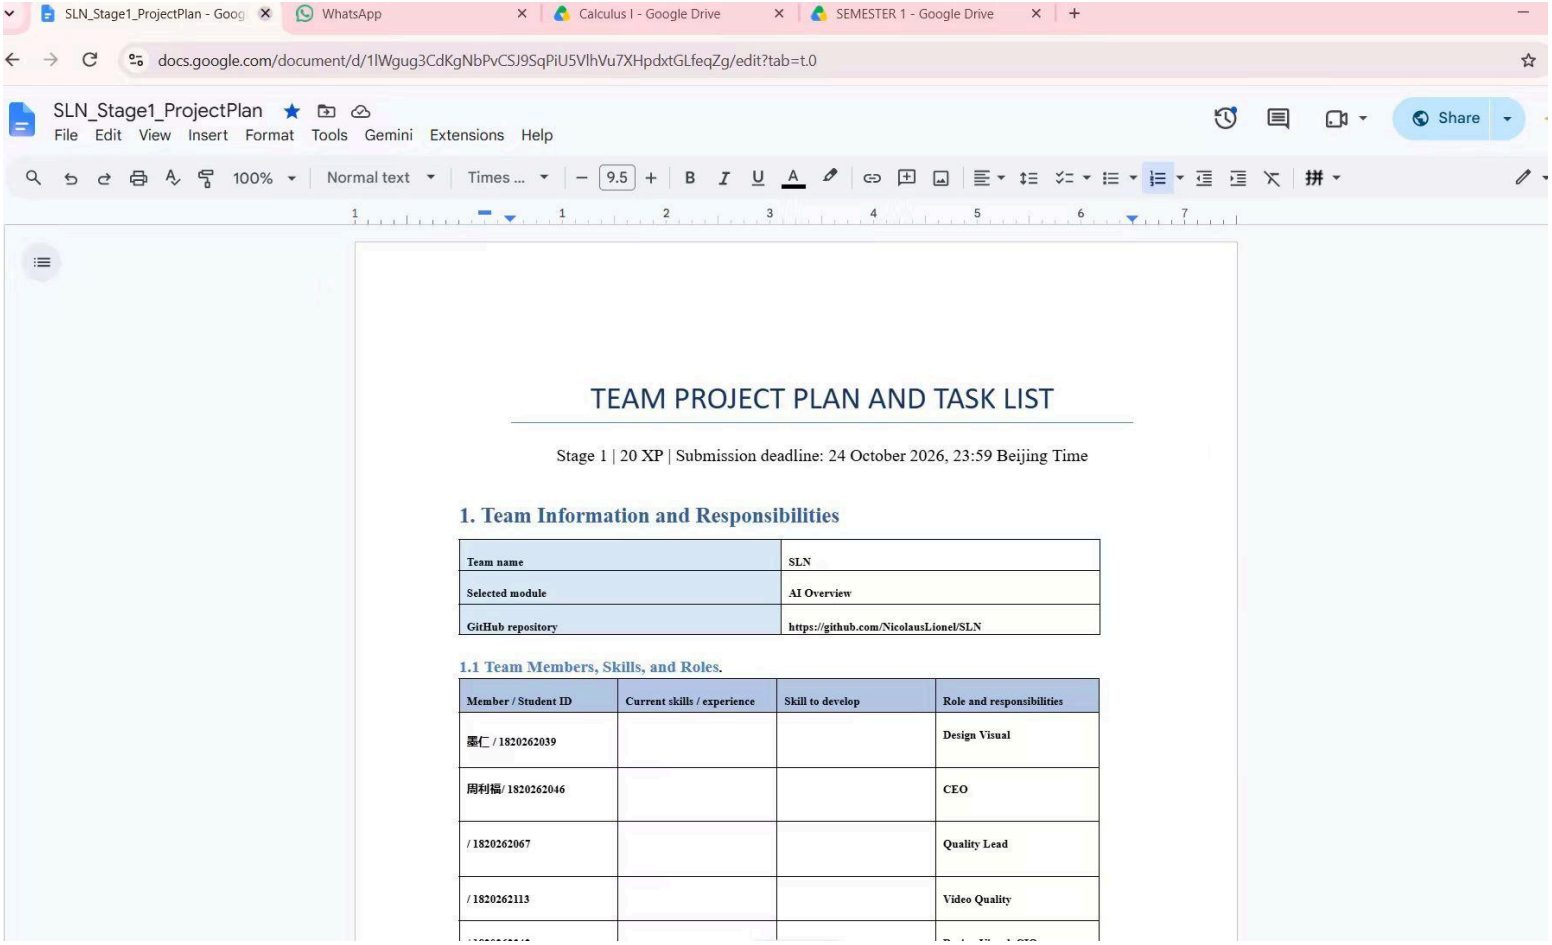

Next step:

I plan to check the document and discuss it with my teammates before submission.

2. Personal Learning Log 周利福/ 1820262046

Date: 21 October 2026

Activity and purpose:

I worked on understanding the team assignment and the tasks we need to finish. Our work involves setting up a GitHub repository and writing learning materials in Markdown. The goal is to create clear and useful content that beginners can understand.

My contribution and outcome:

I reviewed the assignment instructions and identified the main tasks we need to complete, such as writing the learning content, organizing files, and collecting evidence of our work.

Learning and reflection:

At first, I found it difficult to understand all the assignment requirements. After reading the instructions carefully and breaking the work into smaller tasks, I understood what we needed to do.

I learned that our learning materials should include clear explanations, examples, activities, answers, and references. I also learned that we need to use GitHub to keep track of our work and show each team member’s contribution.

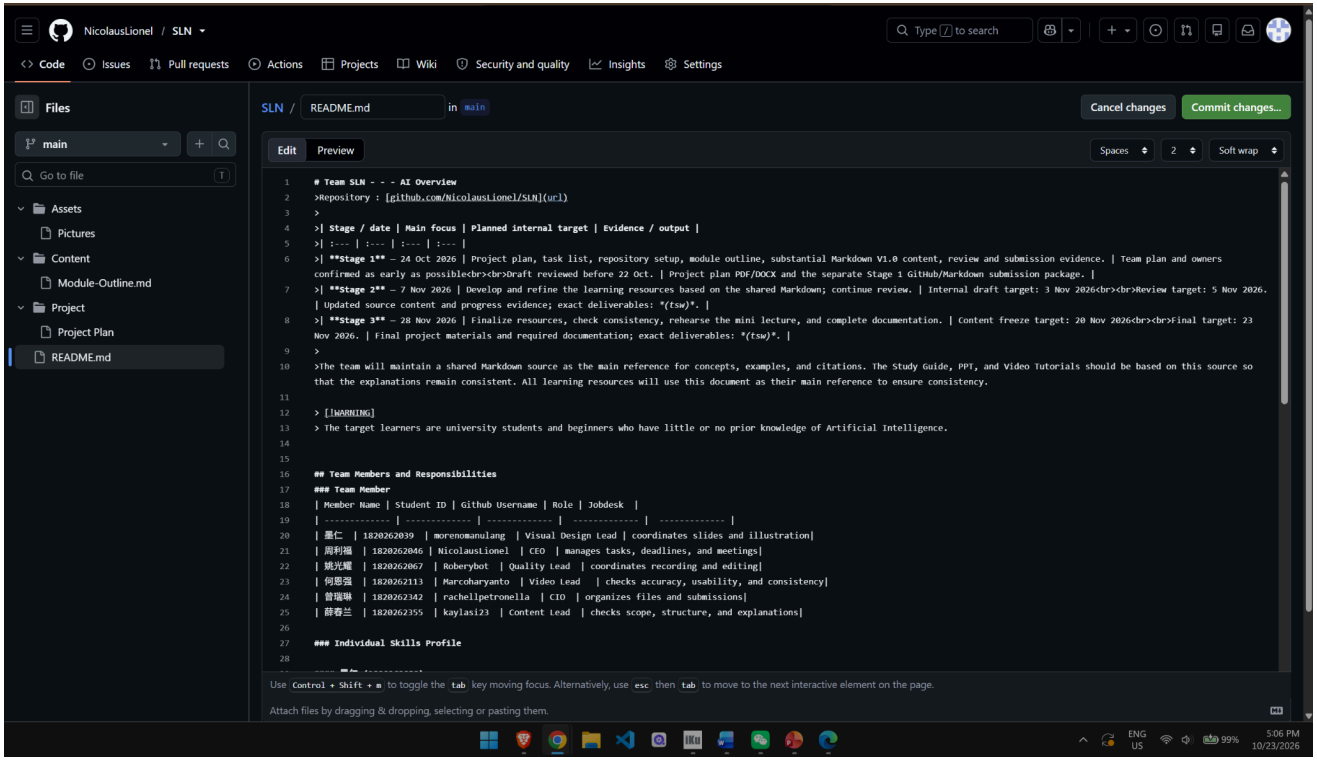

Next step:

PERSONAL LEARNING AND WORK LOG

Stage 1 | 15 XP | Submission deadline: 24 October 2026, 23:59 Beijing Time

I plan to continue working on my assigned tasks, check my work, and ask my teammates for feedback. I will also make sure my contributions are recorded and that all the required files are ready before submission.

3. Personal Learning Log 姚光耀/ 1820262067

Date: 21 October 2026

Activity and purpose:

I read the module brief and marking rubric, then broke the project into main phases. I also helped my teammates assign tasks and deadlines so that we have a complete plan with a timeline and clear responsibilities that the team agreed on. I also started creating our team's personal learning and work log.

My contribution and outcome:

I helped my teammates make a project plan for our module project, because the work had many connected tasks and we needed a clear structure before dividing it up. I also helped in creating our github repository and personal learning and work log so that we can further understand our work and things about ourselves that we need to improve.

Learning and reflection:

I initially found it hard to decide which tasks had to be done first, and our time estimates were too optimistic. But after long discussions and considerations I can finally understand our individual tasks.

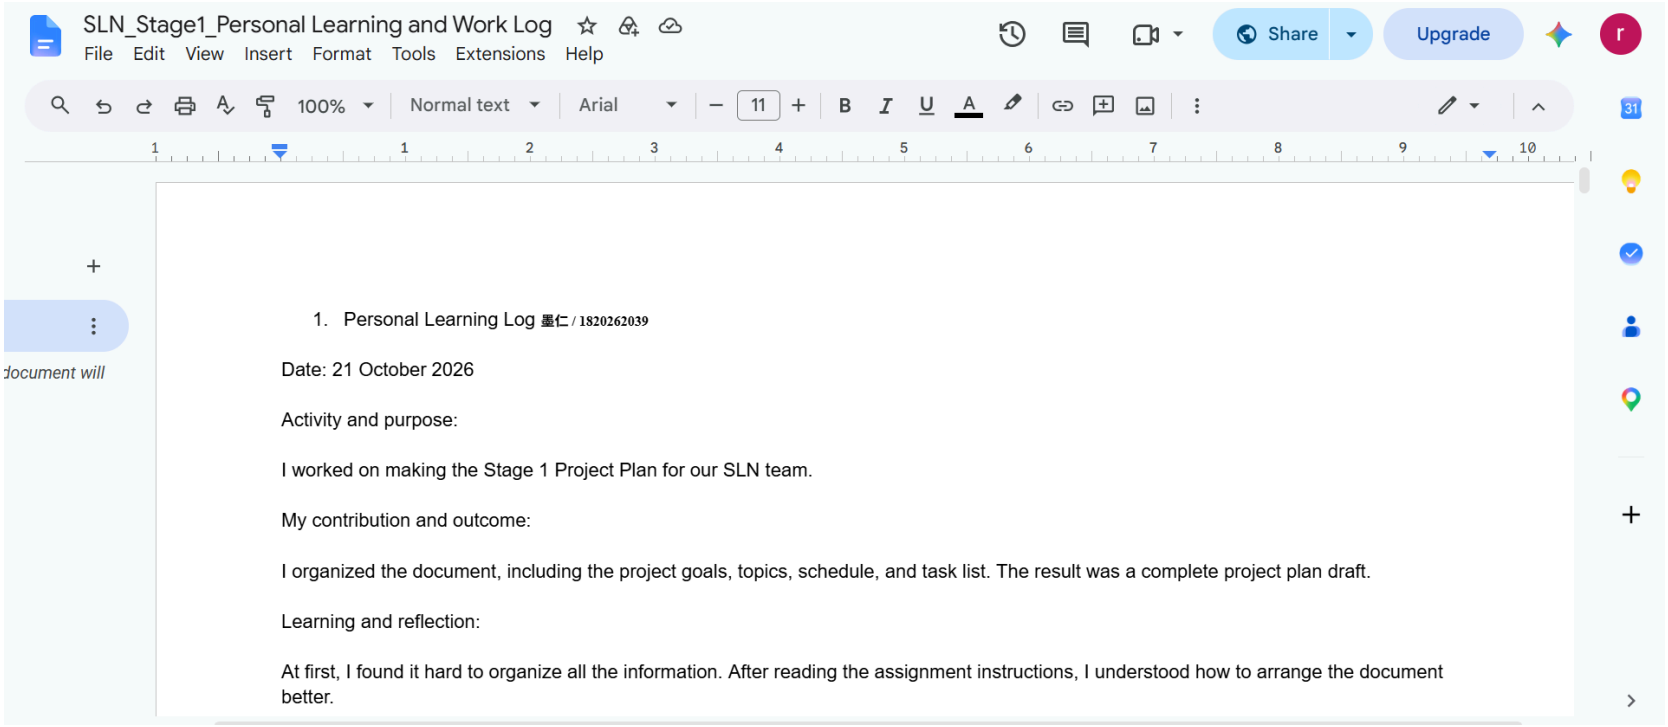

Next step:

I plan to check progress with the team each week and update the plan if tasks fall behind.

4. Personal Learning Log 何恩强/ 1820262113

Date: October 21, 2026

Activity and purpose:

I worked on taking notes during group discussions, problems faced by team members, and documentation.

My contribution and outcome:

As the video lead, I recorded our team's progress and documented how we worked on our tasks. I also noted down important points from our discussions.

Learning and reflection:

As the video lead, I learned how to record our team's progress clearly and make sure the videos show what we actually worked on.

Next step:

I will continue recording our team's progress and make sure our work is documented clearly.

5. Personal Learning Log 曾瑞琳/ 1820262342

Date: 21 October 2026

Activity and purpose:

I created a project plan for our team and proofread it, because we needed a clear final document showing our goals, tasks and deadlines.

My contribution and outcome:

I wrote the plan, including the tasks, deadlines and who is responsible for each one. I then proofread it for spelling, grammar and inconsistent details. The result was a clean final plan the team can use.

Learning and reflection:

I initially found it hard to turn our ideas into specific tasks with realistic deadlines, and I missed mistakes when I reread my own writing straight away. After splitting the project into smaller steps and proofreading again after a break, I understood that planning needs clear details and that proofreading works better as a separate step.

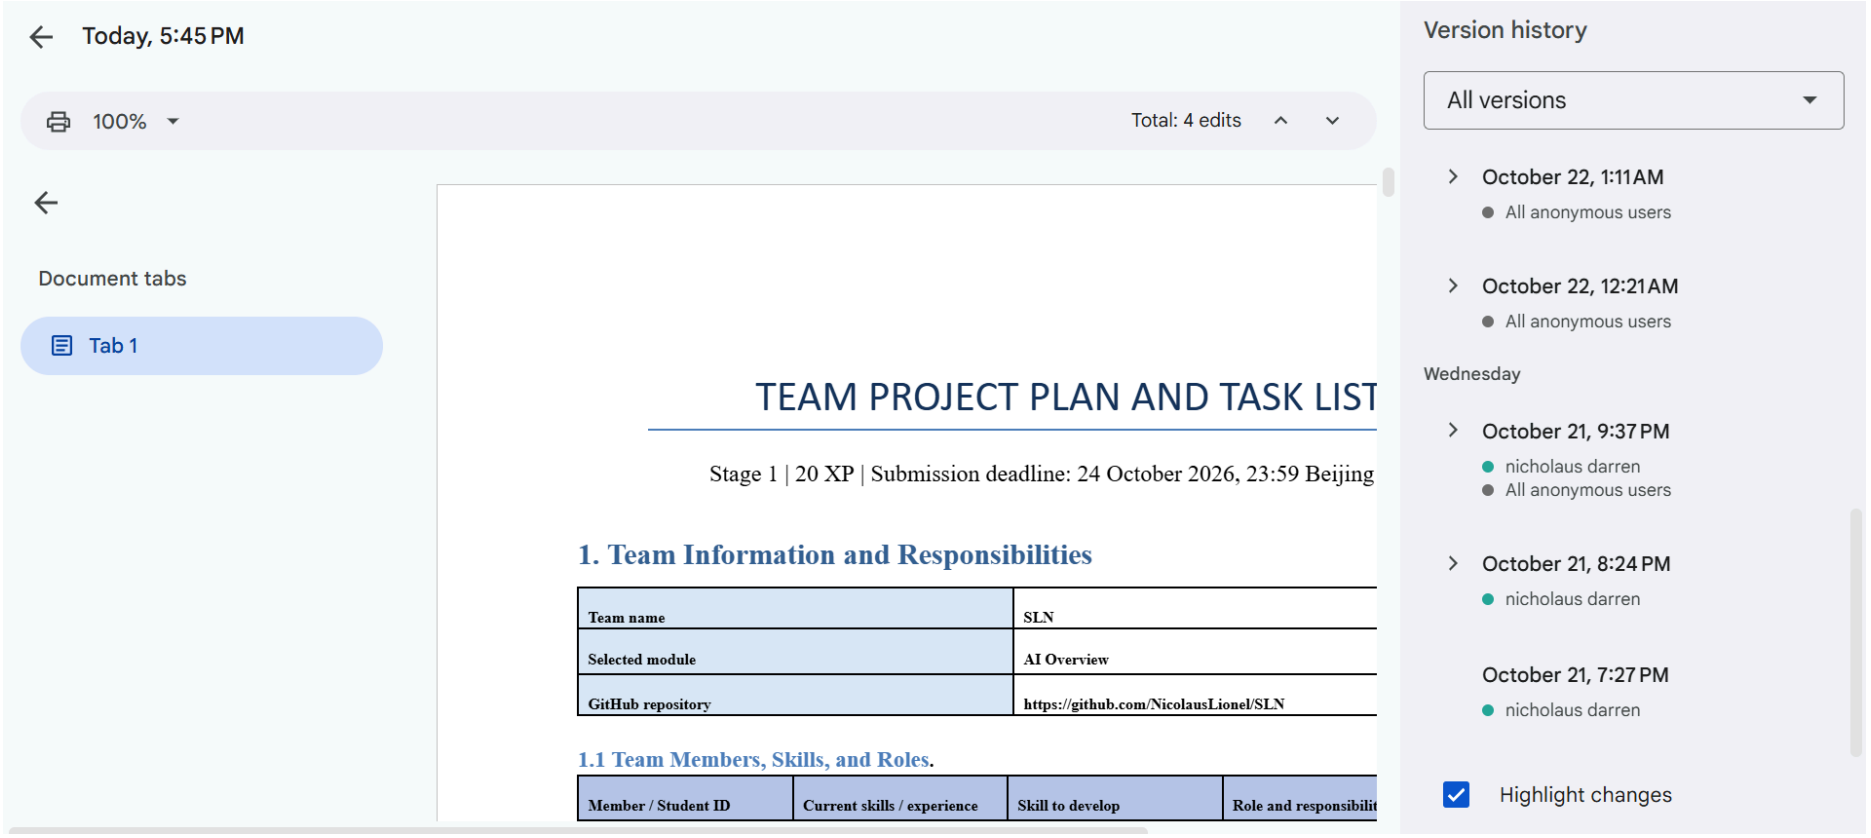

Next step:

I plan to share the final plan with the team and check our progress against it at the next meeting.

6. Personal Learning Log 曾瑞琳/ 1820262342

2nd entry

Date: 23 October 2026

Activity and purpose:

I designed a Canva presentation for our team's project log because we needed one clear place to show our team introduction and meeting summaries.

My contribution and outcome:

I personally designed the slides and wrote the team introduction and meeting summaries. The result was a Canva presentation that is neat, consistent, and easy to update.

Learning and reflection:

I initially found it hard to fit long meeting notes onto slides without making them messy. After I tried shortening them into key points and using one consistent layout, I understood that a good project log shows only the most important information clearly.

Next step:

I plan to ask my teammates for feedback and add new meeting summaries after each meeting.

7. Personal Learning Log 薛春兰/ 1820262355

Date: 21 October 2026

Activity and Purpose:

I started working on our group project about Persuasive Technology: Using Computers to Change What We Think and Do. As the content lead, my job is to organize the information and put everyone's work together for the presentation.

My Contribution and Outcome:

I started planning how to collect everyone's work and organize the content. We are still working on the project, so the presentation is not finished yet.

Learning and Reflection:

I learned that being a content lead requires good organization and communication. I need to make sure everyone's work fits together and the presentation is easy to understand.

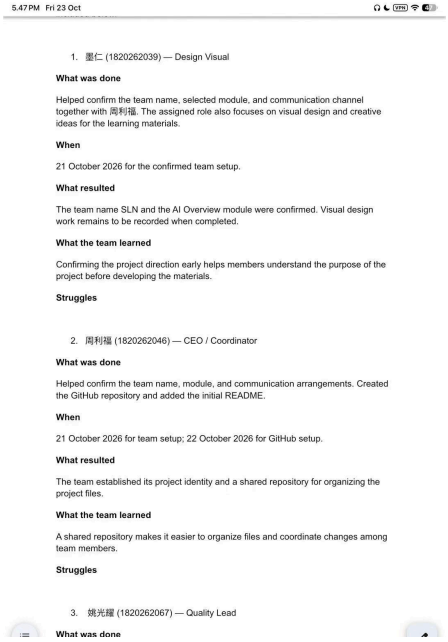

Next Step:

PERSONAL LEARNING AND WORK LOG

Stage 1 | 15 XP | Submission deadline: 24 October 2026, 23:59 Beijing Time

I will continue collecting my group members' work and start putting everything together into one presentation.

Evidence of project log and meeting summaries

5.47 PM Fri 23 Oct

1. 墨仁 (1820262039) — Design Visual

What was done

Helped confirm the team name, selected module, and communication channel together with 周利福. The assigned role also focuses on visual design and creative ideas for the learning materials.

When

21 October 2026 for the confirmed team setup.

What resulted

The team name SLN and the AI Overview module were confirmed. Visual design work remains to be recorded when completed.

What the team learned

Confirming the project direction early helps members understand the purpose of the project before developing the materials.

Struggles

2. 周利福 (1820262046) — CEO / Coordinator

What was done

Helped confirm the team name, module, and communication arrangements. Created the GitHub repository and added the initial README.

When

21 October 2026 for team setup; 22 October 2026 for GitHub setup.

What resulted

The team established its project identity and a shared repository for organizing the project files.

What the team learned

A shared repository makes it easier to organize files and coordinate changes among team members.

Struggles

3. 姚光耀 (1820262067) — Quality Lead

What was done
